SUMMARY

Full-stack developer with 1+ year of experience at Cognizant, delivering enterprise web applications across various domains. Proficient in React, Angular, Java, Spring Boot, and MySQL with practical exposure to AWS, REST APIs, and JWT-based security. Proven ability to contribute across the full stack in collaborative Agile teams, taking ownership of frontend modules, backend APIs, and cloud integrations.

EXPERIENCE

Programmer Analyst | May 2025 – Present | *Cognizant Technology Solutions* · Kolkata, India

Underwriting Insurance Platform | React · Spring Boot · Python · MySQL · AWS Lambda | In Progress

- Developed React-based frontend modules for insurance workflows covering quote generation, proposal submission, and document validation.
- Built and integrated Spring Boot REST APIs coordinating data models and API contracts across frontend and backend team members
- Contributed to an AI-powered document validation pipeline on AWS Lambda (Python), integrated into underwriting and policy management flows
- Optimised MySQL schema and queries for new feature rollouts; resolved PDF generation and cross-environment rendering issues
- Configured Vite build tooling and fixed cross-app JWT authentication and inter-application data transfer issues.

MetLife Insurance Platform | In Progress

- Currently gaining domain and technical context across the MetLife insurance platform in preparation for upcoming development responsibilities

Smart Leave Management System | React · Spring Boot · MySQL · JWT · Swagger | Training Project

- Built the React frontend with JWT auth, role-based dashboards (Employee / Manager / Admin), and leave application and approval flows
- Integrated with Spring Boot REST APIs for leave tracking, balance management, and automated email notifications

Web Developer Intern | Dec 2021 – Feb 2022 | *Internship Studio* · Remote

- Built a responsive e-commerce frontend using HTML, CSS, Bootstrap, and JavaScript with form validation and dynamic UI interactions

PROJECTS

Advanced Weather Monitoring and Disaster Mitigation System *Python · HTML · CSS · JSON · Machine Learning*

- Built a real-time weather monitoring and disaster mitigation platform with flood zone mapping, emergency alerts, and shelter location workflows.
- Led the project from research to deployment using analytics and predictive modeling and Research published at IEEE conference.

Netflix Clone *React · Firebase · TMDB API · Styled Components*

- Feature-rich streaming UI clone with React custom hooks, context API, Firebase authentication and Firestore, and live movie data via TMDB API with YouTube trailer embedding

SKILLS

Frontend: React, Angular, HTML5, CSS3, JavaScript, Bootstrap, Vite

Backend: Java, Spring Boot, Spring Security, Spring Data JPA, Maven, Python, Flask

Database: MySQL, Oracle SQL

Cloud & DevOps: AWS Lambda, Git, GitHub, CI/CD, Postman, Swagger

Tools & IDEs: IntelliJ IDEA, VS Code, Postman, Swagger UI

Other: JWT, Hibernate, Lombok, REST APIs, Agile / Scrum

CERTIFICATIONS

Cloud AWS · Amazon Web Services

React JS · Coursera

Web Design & Development · Udemy

Google Data Analytics · Coursera

EDUCATION

B.E. — Computer Science & Engineering CGPA: 8.73

Sathyabama Institute of Science and Technology, Chennai

12th PCM — 81%

Sri Chaitanya Junior College, Hyderabad
